

Anomatch™ is our range of high-quality architectural polyester powders developed to closely resemble the radiance and sheen of architectural anodising on steel as well as aluminium.

Anomatch

A homogenous finish Anomatch has excellent colour stability and batch to batch consistency. The finishes are matt (30%) and deep matt (8%) with a smooth velvet finish.

Can be used on steel as well as aluminium. Increase design freedom with the strength of steel plus lustrous appearance of Anomatch. Differences in the underlying metal do not affect the appearance of Anomatch. Different metals in a fabrication will have the same appearance.

Does not need high grade aluminium. Less expensive aluminium can be used as Anomatch will give the same finish on all grades of aluminium.

Materials can be drilled, cut or sawn without fracturing the coating. Anomatch can be handled in the same way as powder coating.

Fast turn-around. There are no extended lead times for application of Anomatch.

Available in over 20 shades. The Anomatch range covers ranges of bronze, blue/grey, golds, silver and some colours.

Industry leading guarantees. Guarantees up to 40-years.

Anodising

Little colour consistency

Colour can be inconsistent across adjoining panels. The shade achieved depends on the base metal. Batch to batch colour consistency is poor as process is variable. No international colour standards. Replacement anodised panels may not match the original.

Specialist grade aluminium is needed. No need to stock anodising grade aluminium – reduced stockholding. Scratches in the metal will show through to the surface

Awkward or complex items are difficult to process. Anodising needs secure electrical connection which leaves large witness marks. Colour may change across the surface of complex shapes

Cutting or drilling the item should be done prior to anodising. The anodised surface is brittle – it may fracture if it cut or drilled.

Anodising is a more time-consuming process. Lead-times for architectural applications tend to be longer than for powder coating

Similar guarantees to architectural powder coating. Anomatch guarantees are up to 40-years.
