

## Evolution™ and Rust finishes reflect the patinas caused naturally by metallic oxidation, ageing and changes in composition.

**A “consistent” finish.** We call this consistent inconsistency.

Evolution & Rust finishes evoke the natural rusting, corrosion and aging of steel.

They come “pre-aged” and stay that way

**Light-weight aluminium.** Increase design freedom and reduce static load with a combination of Evolution and aluminium.

**Does not need pre-conditioning.** With Evolution & Rust finishes, what you see is what you get. You can choose dark, medium, light shades, red, brown or black dominant colours.

Do you know what you will get with Corten?

**Almost no maintenance.** Evolution and Rust finishes can be cleaned with water, it's as simple as washing your windows.

**Fast turn-around.** Why wait for Corten when you can have Evolution and Rust finishes in days.

**Evolution is one-finish.** No need for sealing coatings to stop corrosion. Seal coats may lead to unseen corrosion of Corten.

Seal coats will also add to the cost of Corten and will need to be maintained.

**Industry leading guarantees.** Guarantees up to 40-years.

**Professional application.** Evolution & Rust finishes are applied under controlled conditions to achieve a consistency of performance and long-term guarantees.

Corten patination accelerator chemicals are applied in un-controlled conditions.

**Evolution performs in most atmospheres.** Evolution and Rust are stable, inert, polyester finishes.

Corten relies on a protective oxide layer which is soluble and can be washed off or break down to effectively allow the base metal to keep rusting, leading to failure.

**Your pavements will be clean with Evolution.** Corten will have water run-off causing staining of walls, floors, pavements and even penetrating ground water.

**Evolution uses no VOC's in production or application.** Corten finish may be accelerated using Volatile Organic Compound (VOC) chemistry.

**Evolution finishes are perfect for aluminium.** Aluminium is 100% recyclable and retains its original properties.

**Evolution is guaranteed.** Extensive testing enables Powdertech to offer the same guarantees as architectural powder coating.

\* Corten is used throughout this document as a generic term commonly used to describe a rust-promoting alloyed steel. Any comparison with trade names is coincidental.
